

SEP 15 2009

*Application Serial No. 10/645,849***AMENDMENTS TO THE CLAIMS:**

Claim 1 (Currently Amended): An information processing unit comprising:  
a reading section for reading information recorded in a recording medium;  
an information processing section that conducts a reproduction-processing of the  
information read by the reading section;  
a positional instruction recognizing section that recognizes a predetermined position of  
the information as a cue point;  
a change condition selecting section that selects change in a processing position of the  
reproduction-processing;  
a reproducing-condition changing section independent of the change condition selecting  
section, the reproducing condition changing section being adapted to detect a rotating operation  
and a touching operation including a pressing operation; and  
a processing control section that,  
when the change in the processing position is not selected by the change condition  
selecting section, stops the reproduction-processing by the information processing section on  
detecting the touching operation by the reproducing-condition changing section and executes the  
reproduction-processing by the information processing section in accordance with the rotating  
operation on detecting the rotating operation by the reproducing-condition changing section, and  
when the change in the processing position is selected by the change condition selecting  
section, changes start position of the reproduction-processing on detecting the touching operation

*Application Serial No. 10/645,849*

by the reproducing-condition changing section to the cue point recognized by the positional instruction recognizing section and executes the reproduction-processing by the information processing section in accordance with the rotating operation on detecting the rotating operation by the reproducing-condition changing section.

Claim 2 (Withdrawn): An information processing unit comprising:  
a reading section for reading information recorded in a recording medium;  
an information processing section for processing the information read by the reading section;  
a change instruction recognizing section for recognizing an instruction for changing a processing position of said information in the information processing section;  
a change condition setting section for setting processing details for changing the processing position of said information forward or backward and processing details for changing the processing position of said information to a prespecified processing position of said information; and  
a processing control section for changing, when an instruction for changing the information processing position is recognized by said change instruction recognizing section, the processing position in said information processing section according to the processing details set by said change condition setting section.

Claim 3 (Canceled)

*Application Serial No. 10/645,849*

Claim 4 (Withdrawn): The information processing unit according to claim 2 further comprising:

a positional instruction recognizing section for recognizing an instruction for the processing start position to have the information processed at the same position again, wherein said processing control section changes a processing position of said information processing section to the processing start position according to the instruction recognized by said positional instruction recognizing section.

Claim 5 (Currently Amended): The information processing unit according to claim 4, wherein the information recorded in the recording medium includes data and positional information concerning a position of the data,

the information processing unit comprises a position recording section that, when an instruction for the cue-point is recognized by the positional instruction recognizing section, records the cue-point and information preceding and following the cue-point, and the processing control section changes the start position of the reproduction-processing of the information processing section to the cue-point according to the positional information recorded in the position recording section.

Claim 6 (Withdrawn): The information processing unit according to claim 4, wherein the information recorded in the recording medium includes data and positional information concerning a position of the data, said information processing unit further comprising:

*Application Serial No. 10/645,849*

a position recording section for recording, when an instruction for a processing start position is recognized by the positional instruction recognizing section, said processing start position and information preceding and following said processing start position; wherein said processing control section changes a processing position in said information processing section to the processing start position according to said positional information recorded in said position recording section.

**Claim 7 (Previously Presented):** The information processing unit according to claim 5, wherein the processing control section makes, when the start position of the reproduction-processing of the information processing section is changed to the cue-point, the information processing section process the data provided in the information recorded in the position recording section.

**Claim 8 (Withdrawn):** The information processing unit according to claim 6, wherein the processing control section makes, when the processing position in the information processing section is changed to the processing start position, said information processing section process the data for the information recorded in the position recording section.

**Claim 9 (Previously Presented):** The information processing unit according to claim 1, wherein the processing control section makes the information processing section change the start

*Application Serial No. 10/645,849*

position of the reproduction-processing to a cue-point when the reproducing-condition changing section detects the pressing operation or the touching operation.

Claim 10 (Withdrawn): The information processing unit according to claim 2, wherein said change instruction recognizing section determines whether a pressing operation or a touching operation has been performed or not, and said processing control section makes the information processing section change the processing state of the information or move the processing position of the information to the processing start position when said change instruction recognizing section determines that a pressing operation or a touching operation has been performed.

Claim 11 (Previously Presented): The information processing unit according to claim 9, wherein the reproducing-condition changing section is divided into a plurality of blocks, and the processing control section, when the reproducing-condition changing section detects the pressing operation or the touching operation on a specific block, changes the start position of the reproduction-processing of the information processing section based on the cue-point corresponding to the specific block.

Claim 12 (Withdrawn): The information processing unit according to claim 10, wherein said change instruction recognizing section is divided to several blocks, and said processing control section changes, when it is determined in said change instruction recognizing

*Application Serial No. 10/645,849*

section that a specific block has been pressed or touched, a processing position in said information processing section based on the processing start position corresponding to said specific block.

Claim 13 (Withdrawn): An information processing unit comprising:  
a reading section for reading information recorded in a recording medium;  
an information processing section for processing the information read by the reading section;  
a positional instruction recognizing section for recognizing an instruction for a processing start position to have said information processed at the same position again;  
a position recording section for recording, when an instruction for the processing start position is recognized by the positional instruction recognizing section, said processing start position and information preceding and following said processing start position;  
a change instruction recognizing section for recognizing an instruction for changing a position of said information to be processed by said information processing section;  
a processing control section for changing, when the instruction for changing a position of said information to be processed is recognized by the change instruction recognizing section, a position of the information by said information processing section to the processing start position based on the information recorded in said position recording section.

*Application Serial No. 10/645,849*

Claim 14 (Withdrawn): The information processing unit according to claim 13, wherein the information recorded in the recording medium includes positional information concerning data and a position of the data,

    said position recording section records a processing start portion corresponding to an instruction recognized by the positional instruction recognizing section and said information preceding and following the processing start position; and

    said processing control section changes a position for processing in said information processing section according to said positional information included in said position recording section.

Claim 15 (Withdrawn): The information processing unit according to claim 14, wherein said processing control section makes said information processing section process data for the information recorded in the position recording section when the position for processing by the information processing section is changed to the processing start position.

Claim 16 (Previously Presented): The information processing unit according to claim 1, wherein

    the processing control section moves the start position of the reproduction-processing of the information processing unit forward or backward according to the rotating direction of the rotating operation detected by the reproducing-condition changing section.

*Application Serial No. 10/645,849*

Claim 17 (Withdrawn): The information processing unit according to claim 2, wherein said change instruction recognizing section is rotatably provided to detect the rotating direction, and

    said processing control section moves a position for processing by the information processing unit forward or backward according to the rotating direction detected by said change instruction recognizing section.

Claim 18 (Withdrawn): The information processing unit according to claim 13, wherein said change instruction recognizing section is rotatably provided to detect the rotating direction, and

    said processing control section moves a position for processing by the information processing unit forward or backward according to the rotating direction detected by said change instruction recognizing section.

Claim 19 (Previously Presented): The information processing unit according to claim 1 further comprising: a read control section that controls operations of the reading section, wherein the read control section, when the start position of the reproduction-processing of the information processing section is changed by the processing control section, makes the reading section read information near the changed processing position.

*Application Serial No. 10/645,849*

Claim 20 (Withdrawn): The information processing unit according to claim 2 further comprising:

a read control section for controlling operations of the reading section, wherein said read control section makes, when a position for processing by the information processing section is changed by the processing control section, the reading section read information near said changed processing position.

Claim 21 (Withdrawn): The information processing unit according to claim 13 further comprising:

a read control section for controlling operations of the reading section, wherein said read control section makes, when a position for processing by the information processing section is changed by the processing control section, the reading section read information near said changed processing position.

Claim 22 (Canceled)

Claim 23 (Withdrawn): An information processing unit comprising:  
a reading section for reading information recorded in a recording medium;  
an information processing section for processing the information read by the reading section;

*Application Serial No. 10/645,849*

a change instruction recognizing section for recognizing a change instruction for changing a position of said information to be processed by this information processing unit; and a processing control section for making, when a change instruction for changing a processing position of the information is recognized by the change instruction recognizing section, said information processing section execute both the processing for changing a processing position of said information to a preset processing start position and the processing for moving the processing position of said information forward or backward.

Claim 24 (Currently Amended): An information processing method comprising the steps of:

providing an information processing unit comprising: a reading section for reading information recorded in a recording medium; an information processing section that conducts a reproduction-processing of the information read by the reading section; a positional instruction recognizing section that recognizes a predetermined position of the information as a cue point; a change condition selecting section that selects change in a processing position of the reproduction-processing; and a reproducing-condition changing section independent of the change condition selecting section, the reproducing condition changing section being adapted to detect a rotating operation and a touching operation including a pressing operation; reading information recorded in the recording medium by the reading section and conducting a reproduction-processing of the information;

*Application Serial No. 10/645,849*

selecting whether a processing position of the reproduction-processing is changed or not by the change condition selecting section;

when it is not selected to change the processing position by the change condition selecting section, stopping the reproduction-processing on detecting [[a]] the touching operation on the reproducing-condition changing section and executing the reproduction-processing on detecting the touching rotating operation in accordance with [[a]] the rotating operation; and

when it is selected to change the processing position by the change condition selecting section, changing start position of the reproduction-processing by the touching operation on the reproducing-condition changing section to the cue point recognized by the positional instruction recognizing section and executing the reproduction-processing on detecting the touching rotating operation in accordance with the rotating operation.

**Claim 25 (Previously Presented):** An information processing program stored in a computer-readable recording medium, the program making a computer execute the information processing method according to claim 24.

**Claim 26 (Previously Presented):** A recording medium that stores the information processing program therein, wherein the information processing program according to claim 25 is recorded so that the program can be read out by the computer.

**Claim 27 (Previously Presented):** A reproducing unit comprising:

*Application Serial No. 10/645,849*

the information processing unit according to claim 1;  
and a reproducing section that fetches the reproduction-processed information and reproduces the information reproduction-processed by the information processing unit as sound or image.

Claim 28 (Previously Presented): The reproducing unit according to claim 27, wherein the information processing section conducts reproduction processing on music data recorded in a recording medium;

the reproducing-condition changing section has a rotating body provided in a rotatable manner, the reproducing-condition changing section changing a reproducing speed of the reproduction-processing of the information processing section by a rotating operation on the rotating body and stopping the reproduction-processing of the information-processing unit by a pressing operation or a touching operation on the rotating body;

the processing control section changes a processing position of the information processing section to a previously stored position in response to the pressing operation or the touching operation detected by the reproducing-condition changing section, and further changes the processing position by the information processing section forward or backward in response to the rotating operation detected by the reproducing-condition changing section; and

the reproducing section outputs the information processed by the information processing section as sound.

*Application Serial No. 10/645,849*

**Claims 29 - 58 (Canceled)**

Claim 59 (Previously Presented): The information processing unit according to claim 1, wherein operating portions of the change condition selecting section and the reproducing-condition changing section are adjacently provided on an operating panel.
